

Hi, I'm ORBOT!

I'm a satellite - a type of space machine
that goes around the Earth.

Measuring tapes make good satellite
antennas! We need antennas to talk to
people on Earth using radio waves.

Satellites
can do lots of
different jobs.

Some of us
help humans in
different parts
of the Earth talk
to each other.

Some of us look
at the Earth's
environment.

Some of us even
look out into
space to see far
away stars!

Please colour
me in and
choose what
my special job
will be!

I have lots of
solar panels to help
me get energy!

What colour should
my solar panels be?

What else will I need to
do the special satellite
job you have chosen?

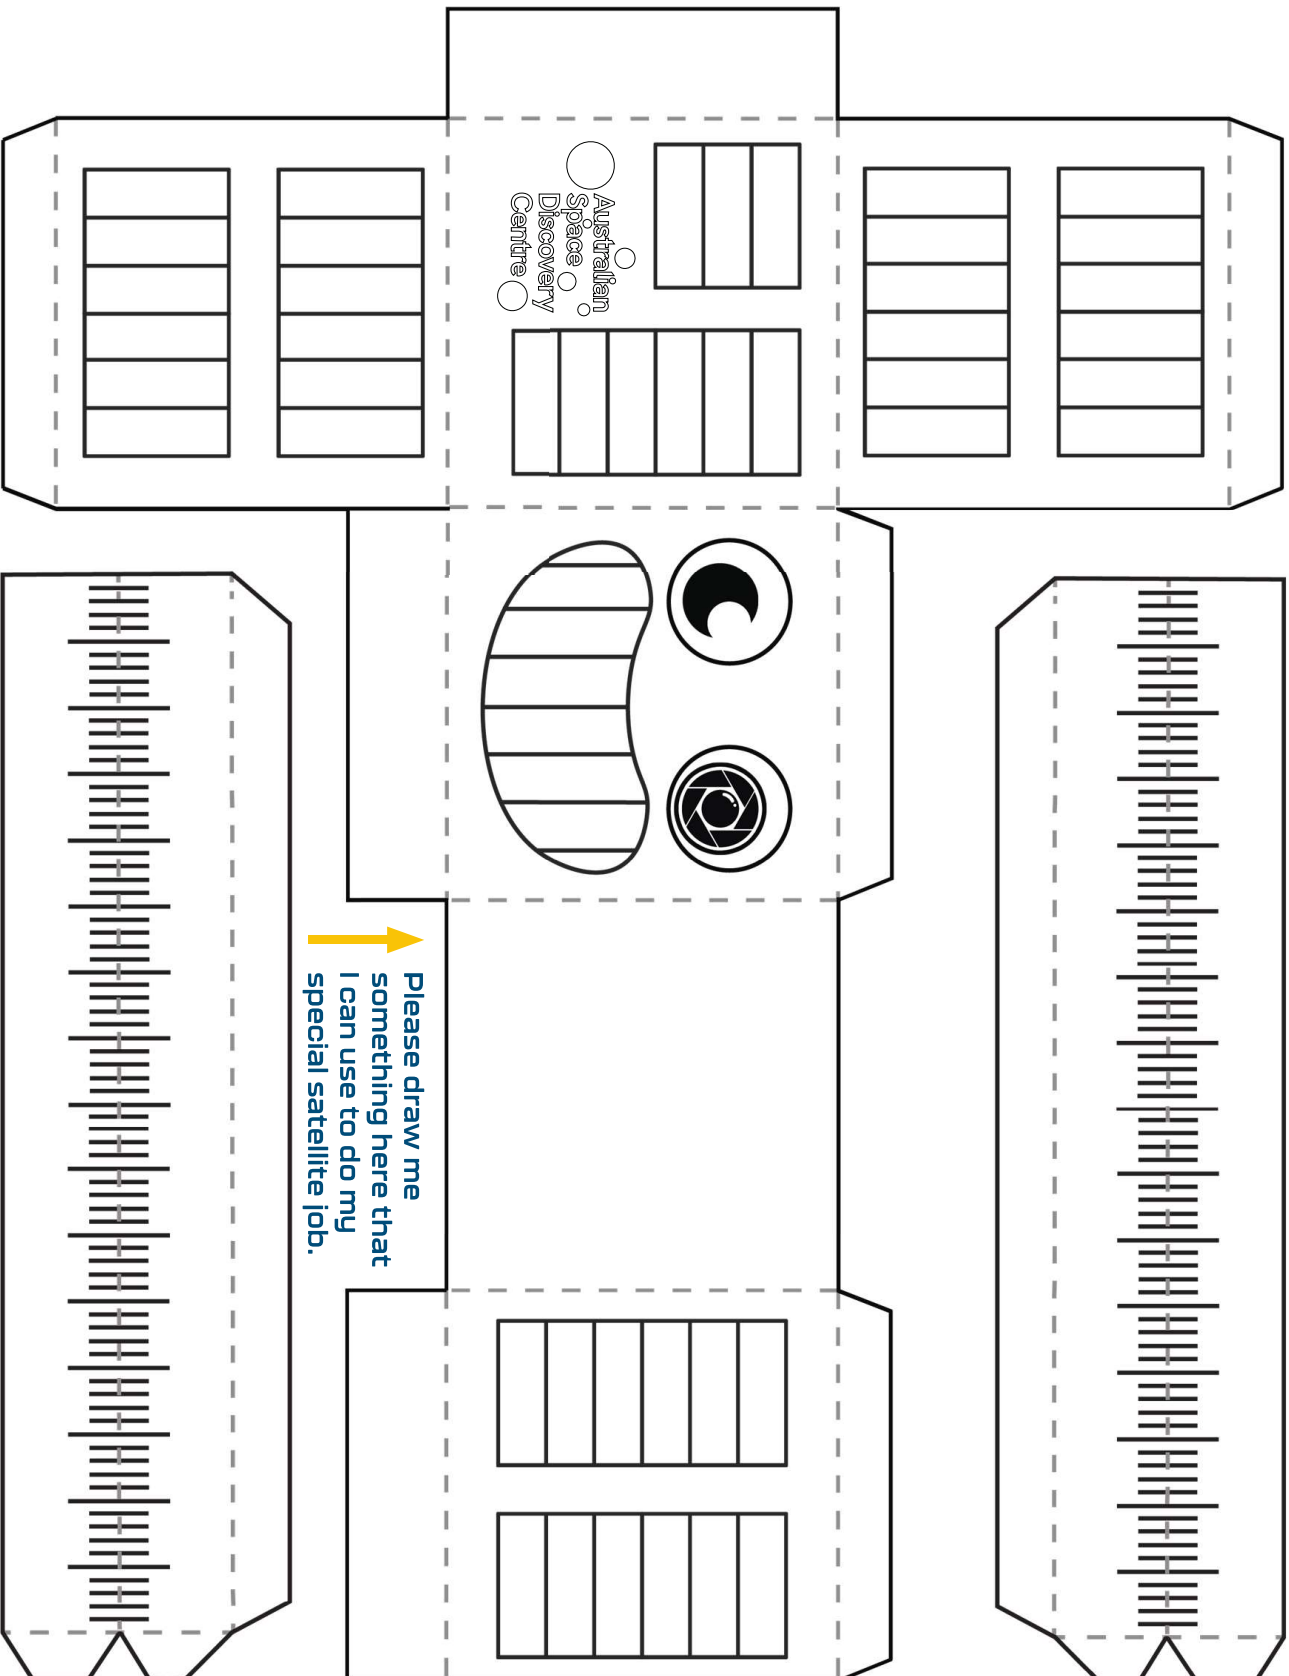

Please make or
draw those extra
things for me.

Show us your Orbot!

Please draw me
something here that
I can use to do my
special satellite job.

Please choose where my
extra parts belong. If I will
need any other parts to
do my special satellite job,
please make them for me.
