

Your day

Brought to you
by space

Teacher Guide

Years K-6

In this activity, use storytelling to explore the ways we use space technology every day.

Materials

- 6-sided dice (1 per student or group)
- Printed A3 Activity sheets (1 per student or group)
- Online video - **Your Day: Brought to you by space**

Instructions

1. Watch the video - **Your Day: Brought to you by Space** as a class.
2. Hand out an activity sheet and a 6-sided die to each student or group.
If doing the activity as a class, share the activity sheet to a screen/smartboard and use a single die.
3. Roll the die at each point in the story to find out what a space technology-enabled day in the life looks like. Discuss as a class and introduce task (see prompts below).

Task Inspiration

You might use this story sheet to guide...

1. a 'day in the life' narrative task or artwork
2. a journal entry in which students observe their own daily use of space technology.
3. a research task (written, poster, multimedia) focused on one piece of technology featured in the story sheet.
4. a short primer for a more extended space science lesson or unit.

Work as a class, in small groups or individually to create your 'day in the life' story!

Curriculum Links and Differentiation

This activity has cross-curricular links in both Science and English learning areas.

Science

Use and Influence of Science (Science as a Human Endeavour)
Communication

English

Creating Texts

General Capabilities

Literacy – Reading & Writing

Options for Differentiation

- Associated tasks for this activity are flexible and open-ended (see 'task inspiration'). Potential tasks may focus on written or verbal fluency, scientific content, multimedia skills or creativity.
- Students may choose to select their own path through the story rather than rolling a die.
- The accompanying video may be used as a stand-alone resource or primer for other activities.
