

Make your own rocket at home!

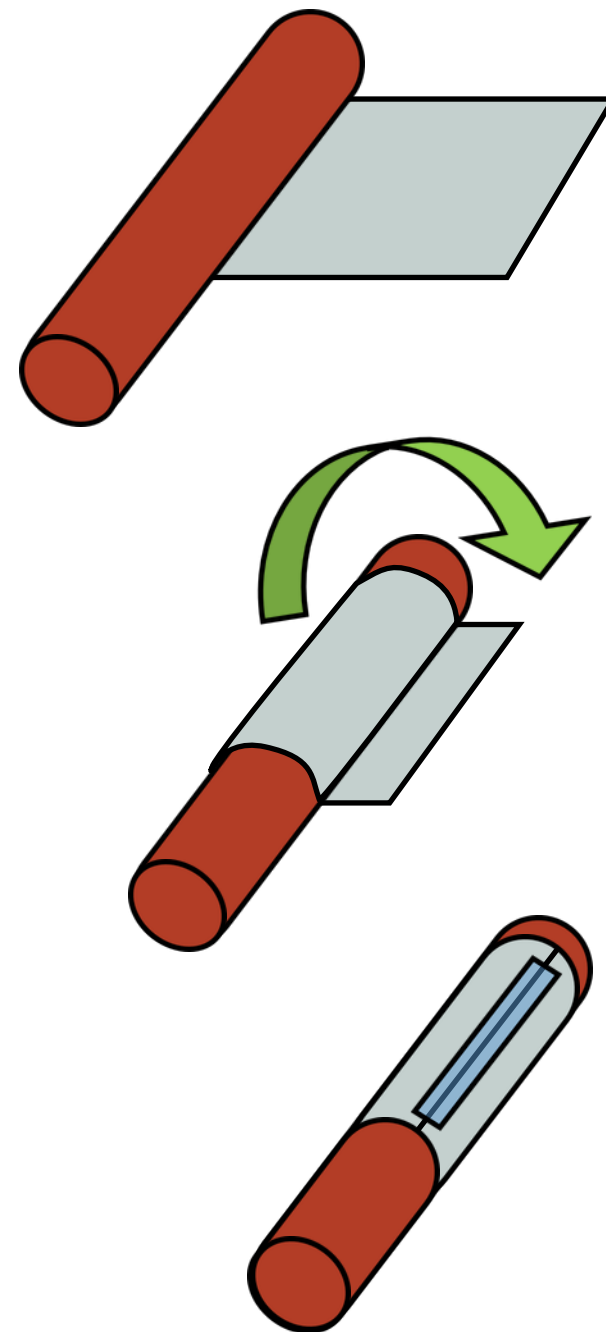

1

Collect your materials and cut out your rocket parts.

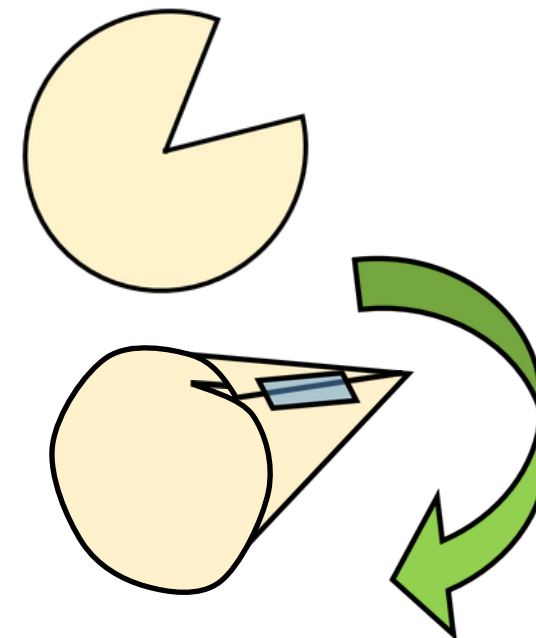

2

Roll the FUSELAGE strip of paper around the paper towel tube, and sticky tape it in.

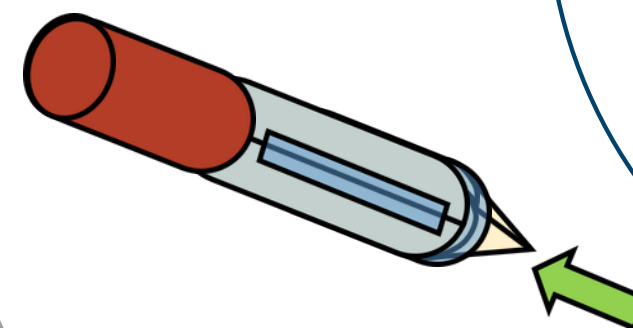

3

Roll the NOSE CONE piece to make a cone, and sticky tape in place. Check you haven't left a hole at the point of the cone.

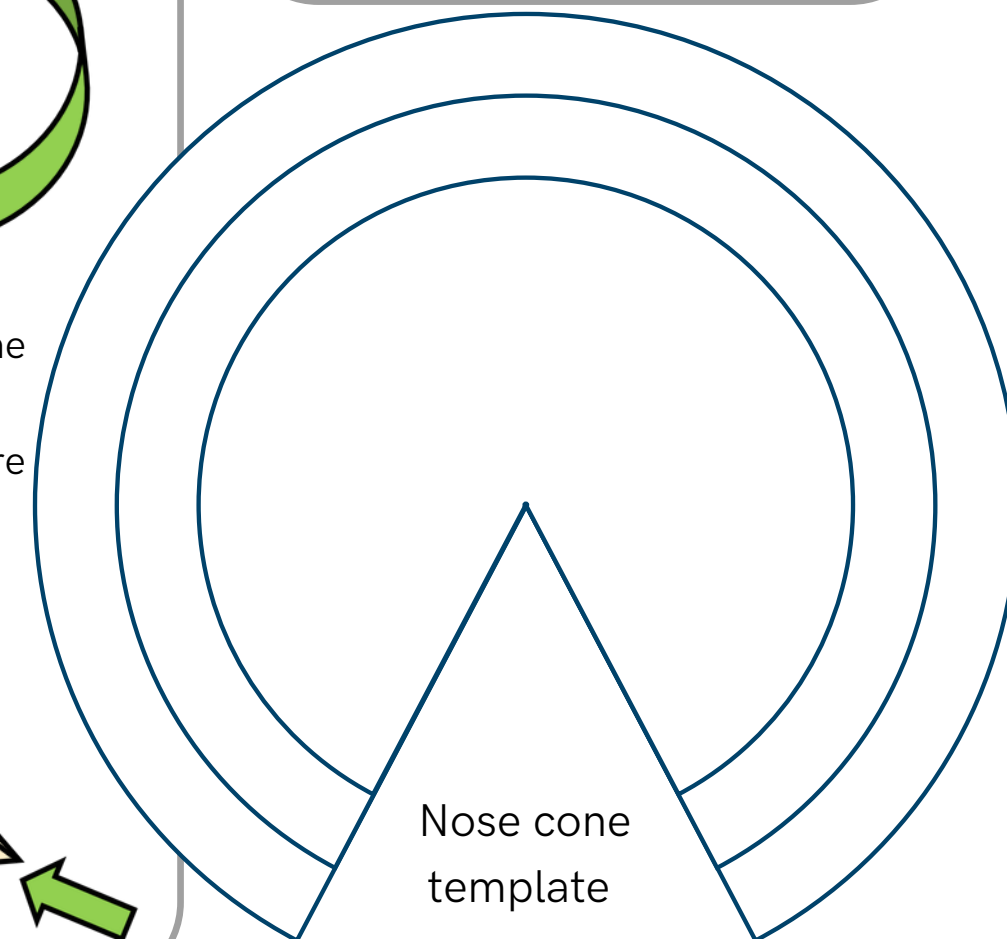

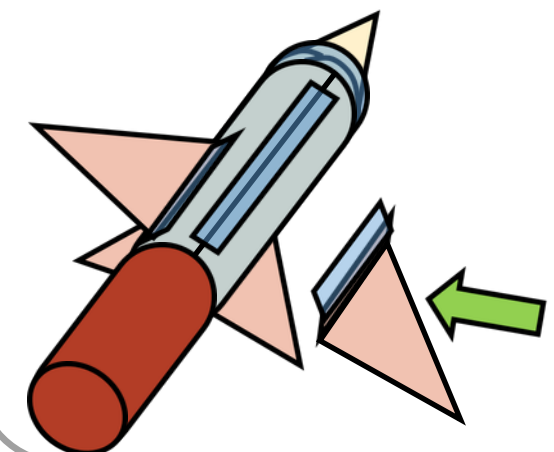

Then carefully sticky tape the nose cone to your rocket fuselage, and check there are no large holes at the join.

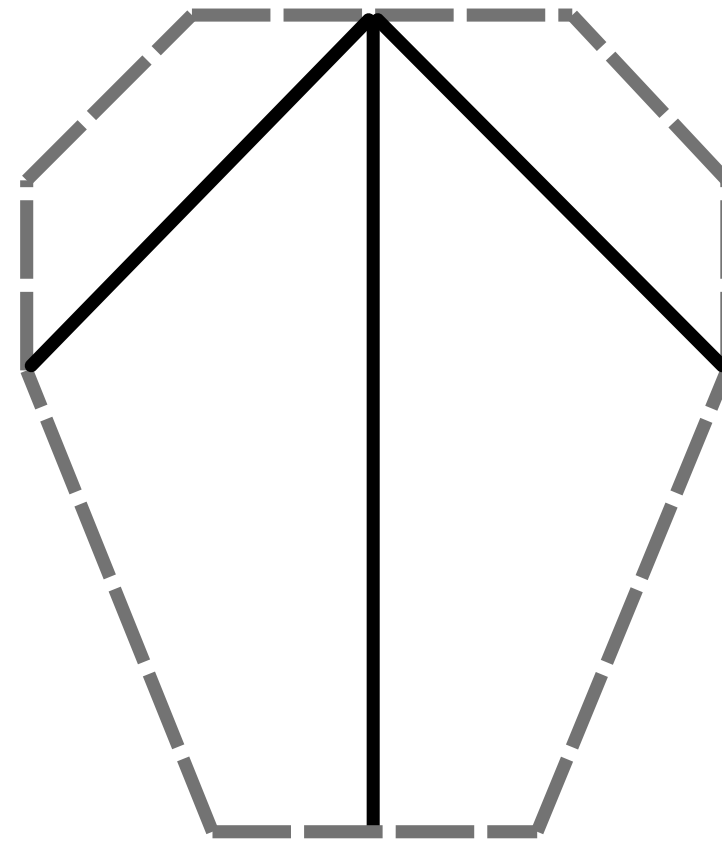

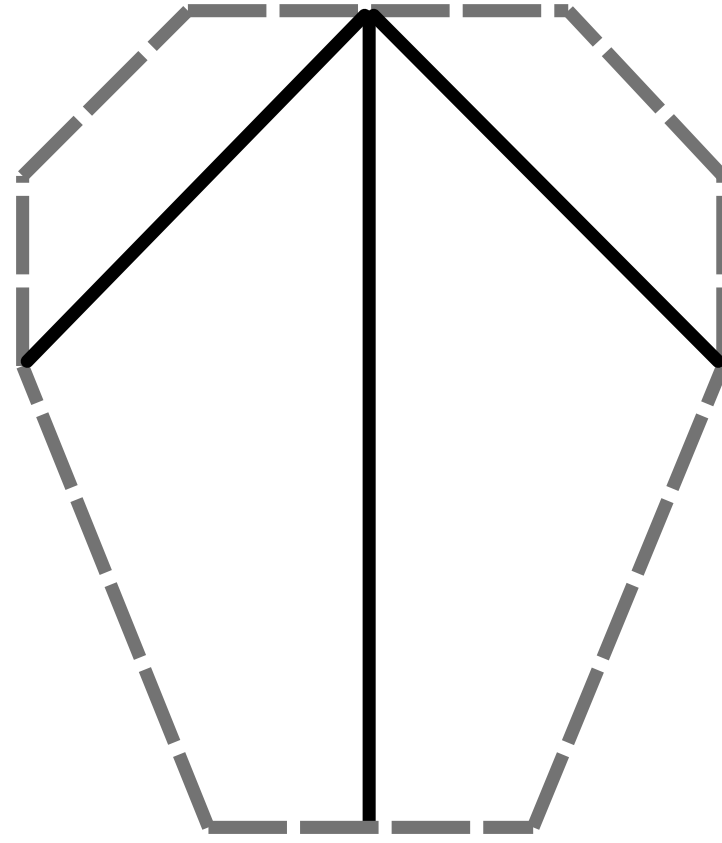

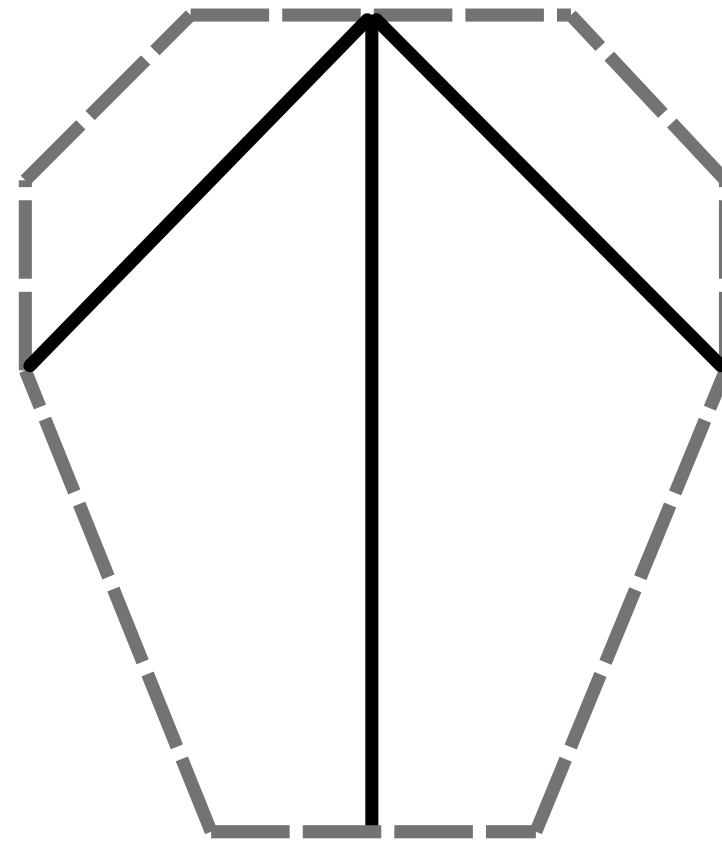

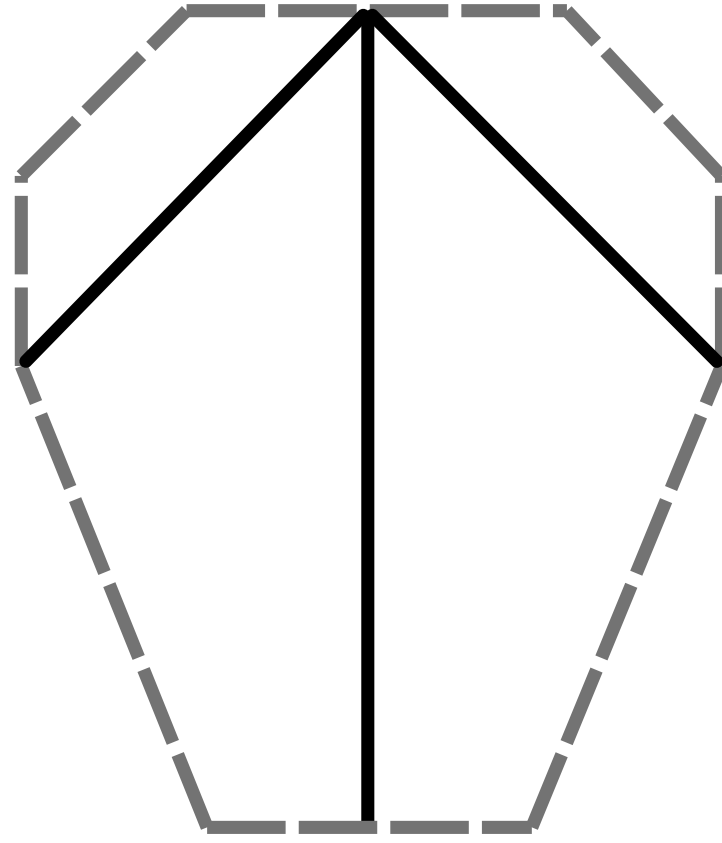

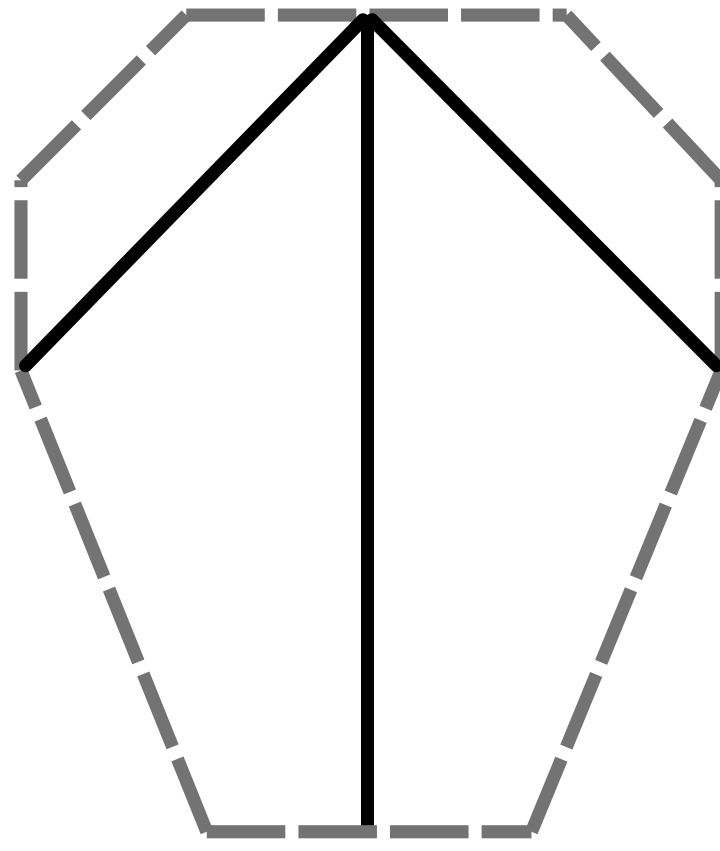

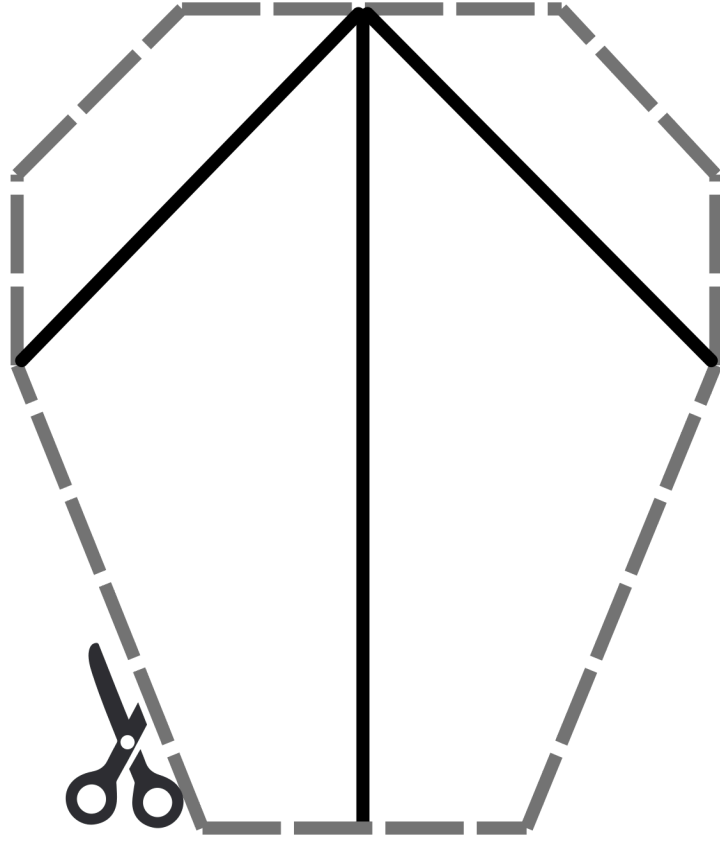

4

Sticky tape the FINS to your rocket. Slide your rocket off the guide cylinder, and you're ready for launch!

Fin template

Cut along the grey dotted lines, then **fold** the solid black lines to make a fin.
This is a generic shape for fins, if you want to get creative, **design your own!**
Experiment with **different shapes, sizes and positions.**
